

FreshSaver

5-minute demo video script

Exactly what to show, click, say, and overlay — timed to finish at 4:45.

VIDEO REQUIREMENTS COVERED

Problem • solution • key features • AI role • live demonstration

Target runtime: 4:45 | Hard limit: 5:00

<https://freshsaver-ai.vercel.app>

<https://github.com/Utpal-Kalita/FreshSaver-AI>

Before you press Record

Prepare the tabs once, then follow the scene cards without improvising claims.

REQUIREMENT COVERAGE

Problem being solved	00:00–00:52	Sourced waste scale plus the local expiry-pricing decision
How the solution works	00:52–01:15	Inventory !' prediction !' policy !' approval !' shopper
Key features and functionality	01:15–02:20 and 02:48–04:15	Owner, products, customers, pricing, marketplace, account
Role of AI	02:20–03:35	Slide 5 role split plus live XGBoost evidence
Live product demonstration	00:52–04:15	Production Vercel app and connected Render model

PRE-FLIGHT CHECKLIST

- Open <https://freshsaver-demand-model.onrender.com/health> once to warm the free Render service.
- Use a 1920×1080 recording canvas and browser zoom around 85–90%.
- Hide bookmarks, notifications, personal tabs, passwords, and developer tokens.
- Open the deck at Slides 1, 2, 6 and 9, plus browser tabs for <https://freshsaver-ai.vercel.app/>, [/login](#), [/dashboard](#), [/dashboard/products](#), [/dashboard/customers](#), [/dashboard/pricing](#), [/deals](#), [/auth/login](#), and [/account](#).
- Confirm the owner and shopper demo buttons work in a private browser window.
- Run the agent once before recording so a pending XGBoost recommendation exists as backup.
- Do not enter real card data. Checkout is explicitly a mock payment experience.
- Keep the “Synthetic data” label visible whenever the credential-free demo is shown.

00:00–00:22 to 00:22–00:52

Show the named screen, perform the action, then read the narration naturally.

SCENE 1

00:00–00:22

PROBLEM BEING SOLVED

SCREEN TO SHOW

PowerPoint: docs/deck/FreshSaver-AI-Builders-Hackathon.pptx
Slide 1 — “Fresh today. Expired tomorrow. Wasted forever.”

ON-SCREEN ACTION

Begin on the full-screen cover. Pause on the supermarket food-waste image before speaking. Keep the image attribution visible.

NARRATION • 48 WORDS

“At closing time, a neighborhood grocer still has milk, spinach, bread, and meat approaching their expiry dates. The food is still usable and still valuable, but the window to sell it is closing. The owner has to decide: hold the price, discount now, or risk throwing it away.”

OVERLAY: Fresh today. Expired tomorrow. Wasted forever.

SCENE 2

00:22–00:52

PROBLEM SCALE AND IMPACT

SCREEN TO SHOW

PowerPoint: docs/deck/FreshSaver-AI-Builders-Hackathon.pptx
Slide 2 — “The waste is global. The decision is local.”

ON-SCREEN ACTION

Reveal each sourced number from left to right: 1.05B tonnes, roughly US\$1T, 8–10% of GHG emissions, 12% at retail, and the EU date-marking estimate.

NARRATION • 73 WORDS

“UNEP reports 1.05 billion tonnes of food waste in 2022 across households, food service, and retail, with retail responsible for 12 percent. Food loss and waste cost the global economy roughly one trillion US dollars a year and generate 8 to 10 percent of greenhouse-gas emissions. Separately, the European Commission estimates that up to 10 percent of annual EU food waste is linked to date marking. FreshSaver focuses on the retailer’s decision window.”

OVERLAY: UNEP Food Waste Index 2024 • European Commission date-marking study

00:52-01:15 to 01:15-01:40

Show the named screen, perform the action, then read the narration naturally.

SCENE 3

00:52-01:15

SOLUTION OVERVIEW

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/>
Public landing page

ON-SCREEN ACTION

Switch from slides to the live landing page. Scroll from the hero to “Make prevention easier than disposal,” then stop at the three-step mission cards.

NARRATION • 43 WORDS

“FreshSaver acts before food becomes surplus. It combines inventory, expiry, recent demand, unit economics, owner approval, and shopper activation in one workflow. The goal is not the deepest discount. It is the right intervention, early enough to protect value and find a buyer.”

OVERLAY: Detect risk !' choose intervention !' connect a buyer

SCENE 4

01:15-01:40

TARGET USERS AND OWNER EXPERIENCE

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/login>
Then <https://freshsaver-ai.vercel.app/dashboard>

ON-SCREEN ACTION

Click “Enter demo owner account.” On Dashboard, point to Active Products, Expiring in 30 Days, Active Deals, Deal Subscribers, and the upcoming-expiry queue.

NARRATION • 39 WORDS

“The primary user is an independent grocery owner. One-click demo access opens a store-scoped dashboard showing active products, inventory approaching expiry, live deals, subscribers, and the next products needing attention. Every query is restricted to the owner’s assigned store.”

OVERLAY: Store-scoped owner portal

01:40–02:00 to 02:00–02:20

Show the named screen, perform the action, then read the narration naturally.

SCENE 5

01:40–02:00

KEY FEATURE: INVENTORY

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/dashboard/products>
Briefly open <https://freshsaver-ai.vercel.app/dashboard/products/upload>

ON-SCREEN ACTION

Show the product list columns. Point to original price, current price, discount, expiry status, Add Product, and Import CSV. Do not upload during the recording.

NARRATION • 37 WORDS

“Owners can add products manually or import their existing CSV. FreshSaver validates dates, prices, stock, duplicate SKUs, unit cost, minimum price, and disposal cost. The product table turns that data into a live expiry and pricing view.”

OVERLAY: CSV-first onboarding • no new shelf hardware

SCENE 6

02:00–02:20

KEY FEATURE: CUSTOMER CONSENT

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/dashboard/customers>
Optional second tab: <https://freshsaver-ai.vercel.app/store/willow-pine-market>

ON-SCREEN ACTION

Show the customer table and point to interests, opt-in source, and status. Briefly show the store-profile “Notify me about deals” action if time allows.

NARRATION • 40 WORDS

“The customer database is also store-specific. Shoppers opt in on a store page or through an in-store QR journey. Owners see the consent source and category interests, so a dairy offer reaches dairy subscribers instead of becoming a broad promotion.”

OVERLAY: Explicit store opt-in • category matching

02:20–02:48 to 02:48–03:35

Show the named screen, perform the action, then read the narration naturally.

SCENE 7

02:20–02:48

ROLE OF AI: WHAT AND WHY

SCREEN TO SHOW

PowerPoint: docs/deck/FreshSaver-AI-Builders-Hackathon.pptx
Slide 6 — “Two AIs. Two jobs. One controlled decision.”

ON-SCREEN ACTION

Show the four columns from left to right. Pause on each WHAT and WHY block: XGBoost, optimizer, Gemini, and store owner.

NARRATION • 65 WORDS

“FreshSaver uses two AI systems for different jobs. XGBoost predicts numerical demand because grocery data is tabular: stock, price, expiry, category, and sales velocity. The optimizer is not AI; it enforces deterministic price floors and safety rules. Gemini is optional and turns fixed evidence into clear language, campaign copy, and a recipe idea, but never chooses the price. The store owner remains the final authority.”

OVERLAY: XGBoost predicts !' policy constrains !' Gemini communicates !' owner decides

SCENE 8

02:48–03:35

LIVE AI DEMONSTRATION AND APPROVAL

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/dashboard/pricing>
Before recording, warm <https://freshsaver-demand-model.onrender.com/health>

ON-SCREEN ACTION

Click “Run Agent Now.” Keep the four progress stages visible. When recommendation cards appear, point to XGBoost, range, clearance probability, margin, factors, model provenance, training provenance, Approve & Notify, and Reject.

NARRATION • 78 WORDS

“Now we run that architecture live. XGBoost predicts sell-through under every allowed price and returns a low, expected, and high range with feature contributions. The optimizer applies unit cost, disposal cost, expiry rules, the merchant's minimum price, and discount limits. The result is stored as a pending recommendation with model provenance, expected margin, clearance probability, and top factors. Nothing is published silently. The owner can approve or reject it, and approval records the reviewer before activating the deal.”

OVERLAY: Live XGBoost evidence • pending owner decision

03:35–04:15 to 04:15–04:45

Show the named screen, perform the action, then read the narration naturally.

SCENE 9

03:35–04:15

EXPLAINABILITY, APPROVAL, AND
CUSTOMER OUTCOME

SCREEN TO SHOW

<https://freshsaver-ai.vercel.app/dashboard/pricing>
Then <https://freshsaver-ai.vercel.app/deals, /auth/login and /account>

ON-SCREEN ACTION

Show Approve & Notify and Reject without changing shared state. Switch to Deals and open an already approved product. Show price, store, stock, and pickup context. Use “Continue as demo shopper,” then show Account.

NARRATION • 73 WORDS

“Every recommendation remains inspectable and reversible. Approval publishes the price and activates only shoppers who opted into that store and category. On the customer side, the approved deal shows the current price, store, stock, and pickup context. The cart is restricted to one store, checkout re-reads price and availability from the database, and the shopper can see the order in their account. This closes the loop from prediction to an actionable local offer.”

OVERLAY: Approved deal !' local shopper !' pickup workflow

SCENE 10

04:15–04:45

IMPACT, VALUE PROPOSITION, AND
CLOSE

SCREEN TO SHOW

PowerPoint: docs/deck/FreshSaver-AI-Builders-Hackathon.pptx
Slide 9 — “Pilot, learn, integrate, then scale.”

ON-SCREEN ACTION

Return to the closing slide. Pause on the live-demo link and roadmap. End before 04:45 and leave five seconds of clean video tail.

NARRATION • 70 WORDS

“FreshSaver is live today: a public marketplace, a store-scoped owner portal, a remote XGBoost model, and a human approval loop. For stores, the value is earlier action and margin-aware pricing. For shoppers, it is affordable local food. For the food system, it is another chance to sell usable inventory before it becomes waste. The next milestone is a controlled store pilot that measures forecast quality, margin, sell-through, and actual waste.”

OVERLAY: Detect risk. Protect margin. Reach the right shopper.

If something fails, keep the story moving.

Do not debug on camera. Use one sentence, switch to the prepared fallback, and continue.

RENDER COLD START

Open /health, wait for status 200, then restart the Pricing Log scene.

AGENT TAKES TOO LONG

Use the already-generated pending recommendation and say the scan was pre-run for recording continuity.

GEMINI UNAVAILABLE

Point to “template fallback” and explain that pricing is XGBoost plus deterministic policy, independent of Gemini.

BREVO UNAVAILABLE

Do not claim an email was delivered. Say approval prepares the campaign and provider delivery is optional.

DATABASE ISSUE

Switch to /demo and continue with the clearly labeled synthetic fallback workflow.

ASKED FOR ROI

No causal ROI is claimed. The next milestone is a controlled merchant pilot.

OPENING SOURCES

[UNEP Food Waste Index Report 2024 and key findings](#)

[European Commission date-marking and food-waste prevention](#)

CLAIM DISCIPLINE

Do not say all global food waste is caused by expiry dates. The date-marking estimate is EU-specific. Do not call synthetic campaign value incremental revenue.
